ABOUT ME

- 4 years of experience building production backend systems in Go, Java, and Python across product and enterprise environments.
- Experience owning backend services end-to-end, integrating backend services and making technical decisions that affect reliability, compatibility, and delivery.
- Currently developing Java microservices at Zara Home (Inditex), working with Domain-Driven Design, hexagonal architecture, system integration, and automated testing.
- Remote (EU-based) | Open to relocation for the right opportunity.

PROFESSIONAL EXPERIENCE

Backend Software Engineer

July 2026 – Present

Inditex (Zara Home) - Arteixo, Spain

- Develop Java/Spring backend services and integrate internal APIs across multiple services and databases, working within an established Domain-Driven Design and hexagonal architecture.
- Develop and evolve a product label-generation microservice. Investigated data flows across multiple services, diagnosed a build-tooling defect masking unrelated compile failures, and redesigned an API change from breaking to additive to preserve compatibility with existing consumers.

Software Engineer

March 2025 – July 2026

Imbee - Barcelona, Spain

- Built and maintained Go and Python backend microservices powering an AI chat platform used in production.
- Designed event-driven workflows with RabbitMQ and Redis to coordinate asynchronous communication across independent services.
- Deployed containerized services using Docker and AWS (ECS, Lambda, S3), contributing to production delivery and operational troubleshooting.
- Built a custom step for an AI chatbot platform, combining HTML, CSS, JavaScript, and Python to let users create interactive experiences inside bot workflows, including forms, loading states, and callbacks to other steps and backend endpoints.

Full-Stack Software Engineer

July 2024 – December 2024

Indra - Barcelona, Spain

- Maintained and extended backend systems (Java + Spring MVC, .NET) for transportation-sector platforms, handling incident resolution, testing, and multi-system integration while preserving backwards compatibility.
- Delivered frontend features in React across parallel client projects in a multi-team consultancy environment.

Intern Software Engineer

December 2023 – May 2024

Dynatrace - Barcelona, Spain

- Built a new internal product-analytics platform for Dynatrace's enterprise clients from the ground up, using TypeScript and React.
- Gained first exposure to large-scale engineering practices — clean code, code review, and testing standards — within an Agile product team.

Junior Software Developer

August 2022 – September 2023

Applus+ - Barcelona, Spain

- Built internal desktop tooling in C#/.NET and Java to automate certificate issuance and resolve operational incidents, reducing manual processing.
- Built Angular-based interfaces to support operational workflows and data visualization.

SKILLS

Languages

Java • Go • Python • TypeScript / JavaScript

Infrastructure

Docker • AWS (ECS • Lambda • S3)

Data & Messaging

SQL • JPA • Redis • RabbitMQ

Backend

Spring Boot • REST APIs • Microservices • Event-Driven Architecture • FastAPI

Frontend

React

Testing

JUnit • Mockito • Unit & Integration Testing

EDUCATION

Bachelor's Degree in Computer Engineering for
Management and Information Systems

Tecnocampus (ESUPT) Universitat Pompeu Fabra

September 2019 – June 2024

LANGUAGES

Spanish: Native | **English:** C1 - Professional working proficiency — daily communication with international teams and stakeholders | **Catalan:** Native
